

a small band made a big difference in my life.

Lap Band adjustable Gastric Banding System is a minimally invasive weight-loss surgery that involves applying a band around the stomach. This system allows the physician and patient to adjust the size of the gastric pouch as needed.

“After numerous diets and routines, the lap band has been the only thing that has helped me lose weight and keep it off. I am on the road to living a longer and more productive life with my family, for my family. The lapband is the built in "will power" that I needed.”

Kyleigh Perry. Administrative Services at a local software development company
LAP-BAND System Patient
Weight Lost: 70 pounds

- Reduced surgical trauma and pain
- No cutting or stapling of the stomach
- Shorter hospitalization than standard surgery
- Fully reversible by simply removing the band

The obesity management team monitors the complete pre-op and post-op care of chosen candidates. To date Dr. Richard Benavides has completed over 300 cases in this community and 1,000 cases in the state of Texas. Dr. Benavides and Dr. Gerald Garwood team up at College Station Medical Center for this laparoscopic procedure.
